Documentation is the act of thinking and then putting those thoughts on paper.

“

Even if you've already decided on the next step you'll take to resolve a problem, your mind can't let go until and unless you park a reminder in a place it knows you will, without fail, look. It will keep pressuring you about that untaken next step, usually when you can't do anything about it, which will just add to your stress.

—David Allen, *Getting Things Done*

Preparing & planning

Managing the messy middle

Unlocking future potential

Effective > efficient

Miller's Law

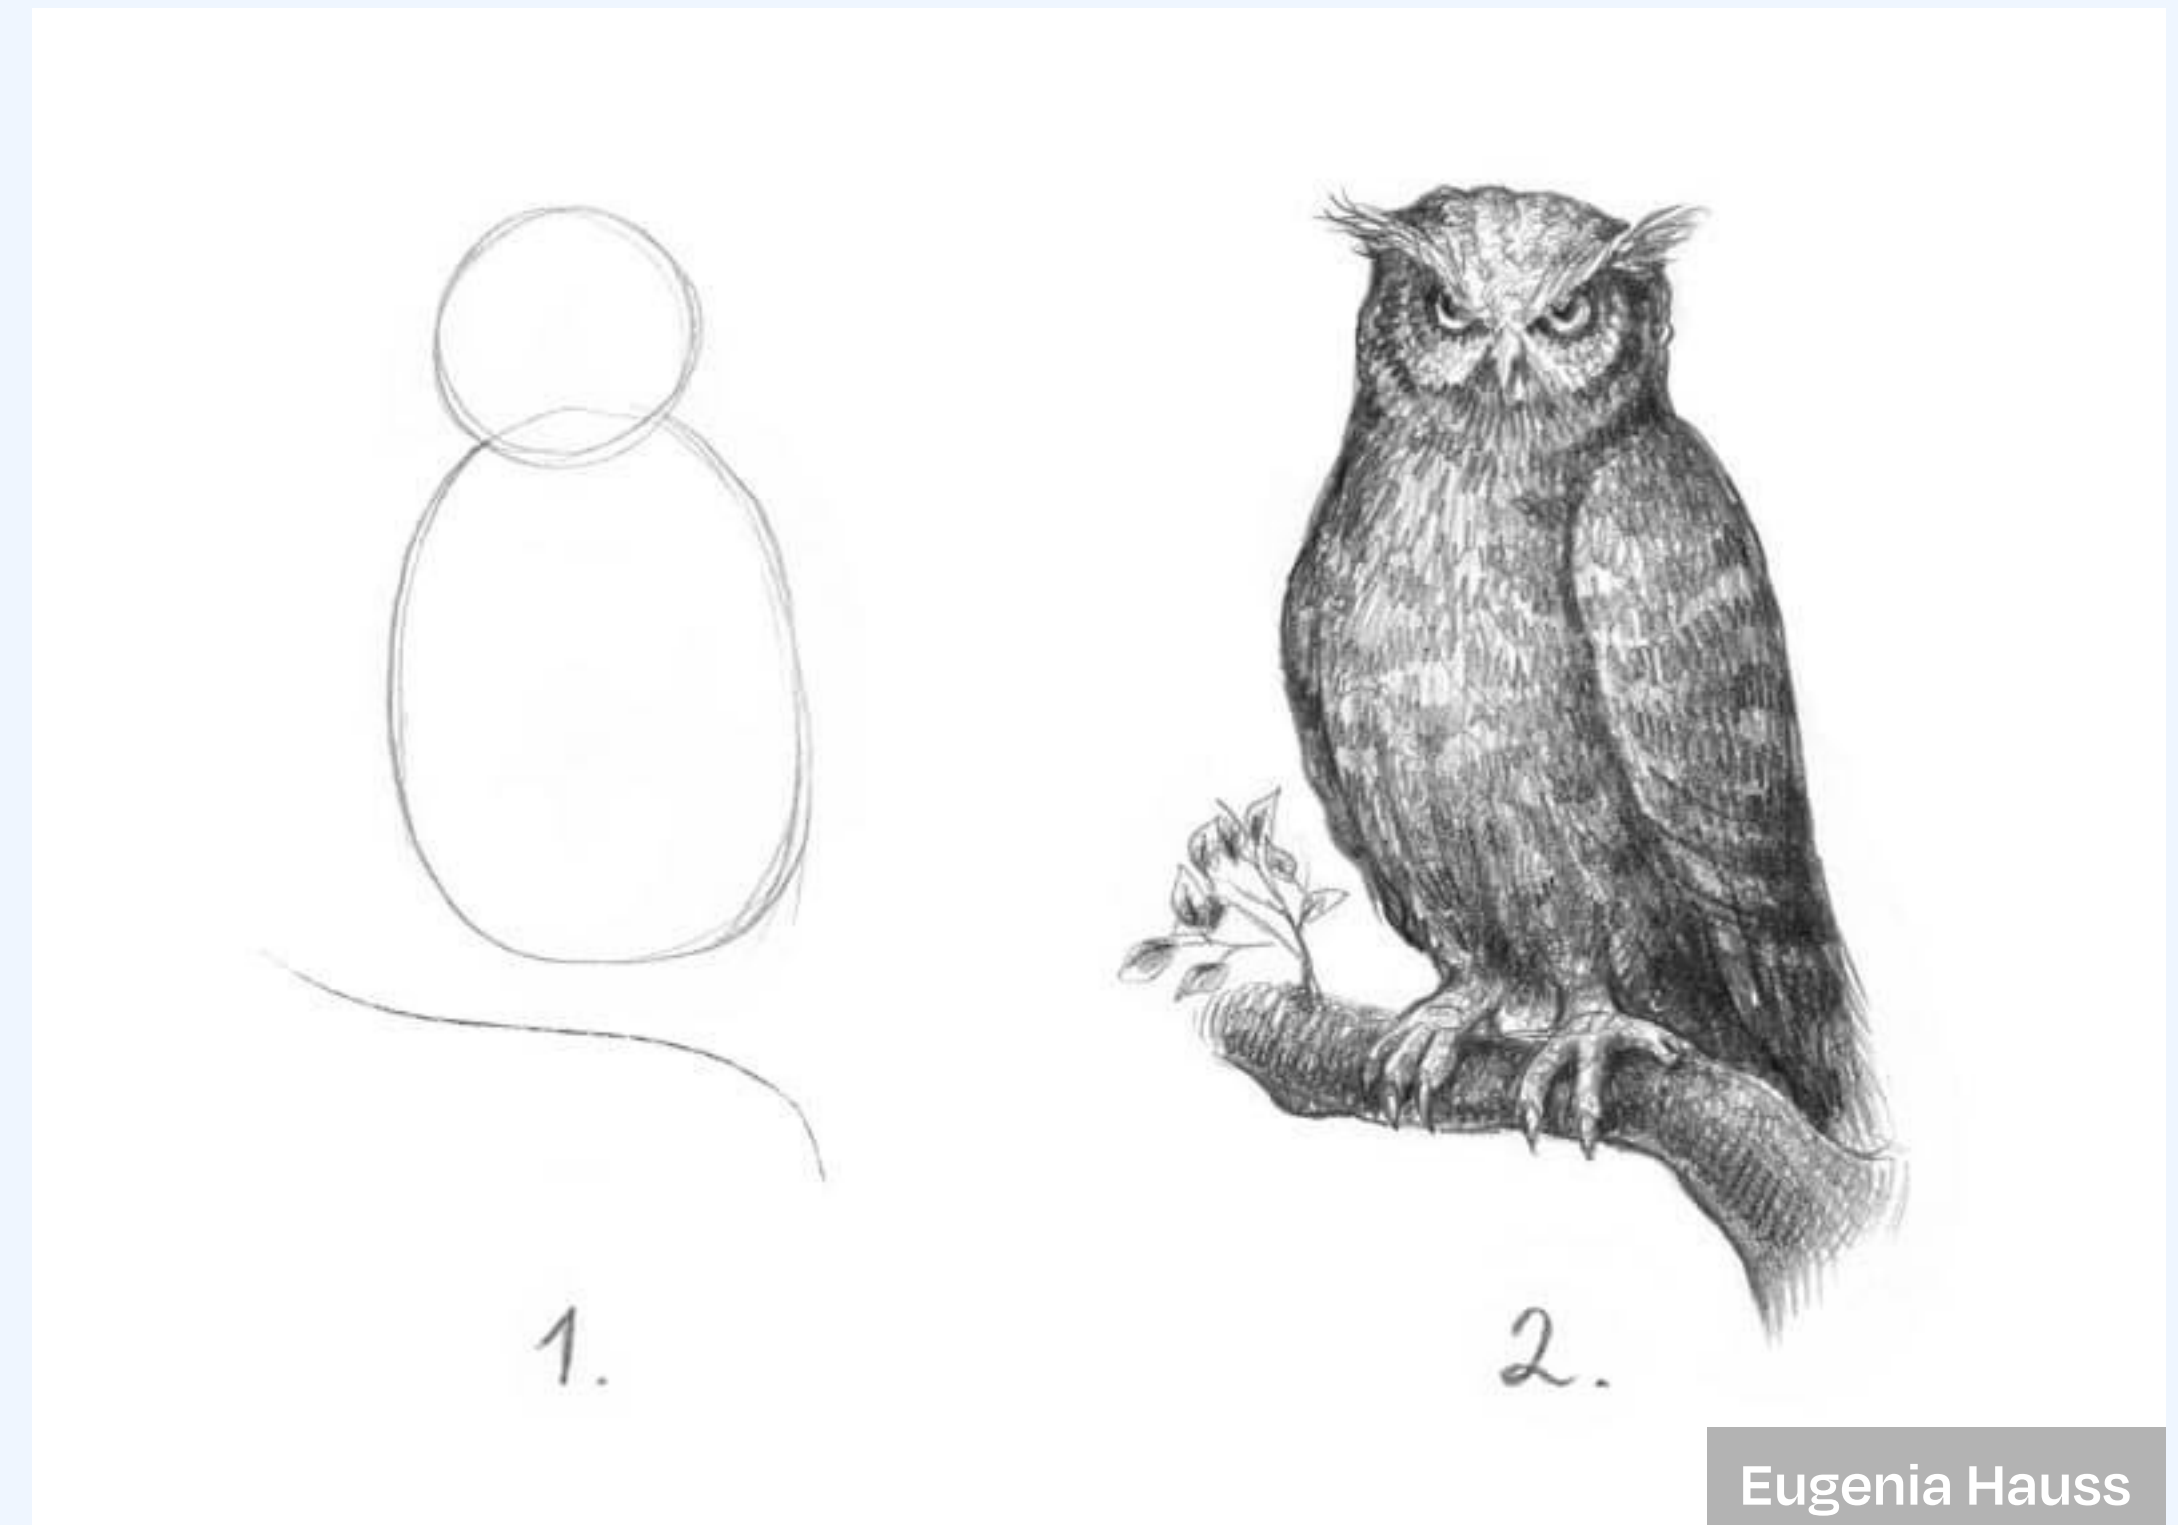

The immediate memory span of people is limited to approximately seven items, plus or minus two.

??????????

(517) 481-2218

Benefits of chunking

- Breaks down large tasks into smaller, more manageable pieces
- Makes it easier to make progress between meetings and in spare time
- Reduces cognitive overhead
- Enables delegation and faster feedback

Chunking also prevents this.

Fog of uncertainty

Know your audience

- Document where the right people are going to see it
- Tailor information to what that audience needs
- Don't assume—avoid words like “just” and “simply”
- Use visuals and external links for additional context

Documenting code with comments

- Good documentation is self-descriptive, but include business logic where needed
- Use chunking to think through the code before you write it
- Leave URLs as breadcrumbs to inspiration or earlier thinking

Development parallels

- Write “escape hatches” like you would an early return—let someone stop reading if it’s not relevant to them
- Think of task templates like you would a repeatable function
- Documentation-driven development: use comments to help you plan your code

Naming things is hard...or is it?

- Be clear, not clever!
- Use action-based variables (“getRoles,” “saveToken,” “prepareData”)
- Name state functions clearly, also starting with verbs (“isOpen,” “hasProfilePicture”)
- Mindset: keep functions small, then name them according to that function

Architecture Decision Records (ADRs)

- Document “invisible standards” that are expected, but not yet written down
- Include context about why the decision was made
- Should exist for the long term, but can change as technology evolves

Use Paragraphs Library module to manage repeatable, reusable content

Nº ADR #	ADR-16

Context

The WLH team has requested that content be repeatable and editable from a single location. These repeatable content blocks are not just in the form of structure, like Paragraphs are meant to provide, but the content itself should also be repeated. Paragraphs are really only meant to repeat the layout, not also the content within. Thus, we need further consideration of something that will let us repeat both the content and the structure.

Decision

The Paragraphs module comes with a (poorly documented!) submodule called Paragraphs Library, which allows content editors to maintain a library of Paragraphs whose contents should be reusable across multiple pages. Content editors can create Paragraphs as normal, then promote an individual Paragraph to the library, making it reusable. When they do, that Paragraph turns into a *From library Paragraph*, referencing the Paragraph that's been added to the library.

Taking notes in meetings

- Yes, developers should take notes too!
- Note important information, decisions, and next steps—don't transcribe the full conversation
- Use document templates for easy prep

Agenda

Meeting Notes

Next Steps

To-do

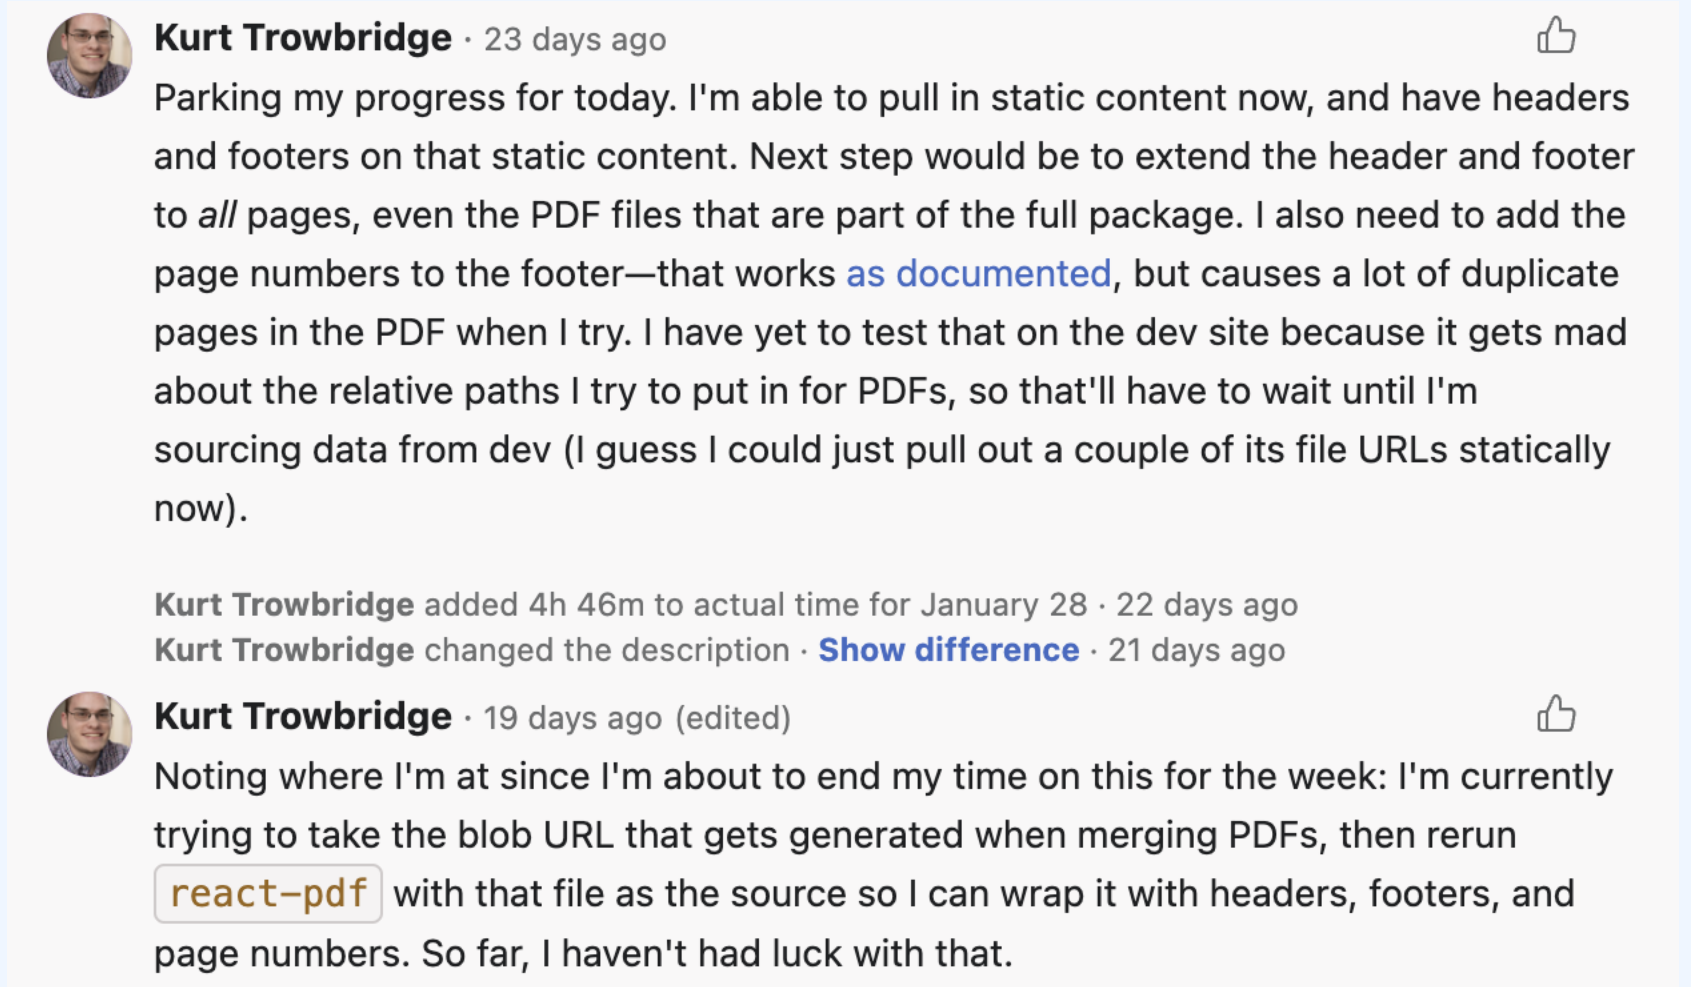

Meeting notes

- Newspack timing: probably starting Q4 2023, launching in July 2024(?)
 - Tech accelerator program with NTEN—4 hrs. with tech consultant from IBM in Canada; she's going to talk to Newspack
 - Bridge isn't in any huge hurry, so we'd talk about timing especially in terms of migration
- ★ Remove the COVID Dashboard & Tracker from the homepage sidebar
- Live-blogging still on Bill's radar, but probably not for a couple months
- Bill & Katie working on GTM popups; call today after Katie possibly got it figured out yesterday
 - AMP signup CTA is getting good traffic; might switch from OptinMonster to Mailchimp
 - Once UTM source tracking is working, Bill thinking again about Topic landing page updates

Emojis help highlight next steps during a meeting.

Checking out

- Before you wrap up on a task and switch to something else, take note of where you're leaving off
- Helps project managers stay in the loop
- Reduces effort needed to spin back up next time

Kurt Trowbridge · 23 days ago 

Parking my progress for today. I'm able to pull in static content now, and have headers and footers on that static content. Next step would be to extend the header and footer to *all* pages, even the PDF files that are part of the full package. I also need to add the page numbers to the footer—that works [as documented](#), but causes a lot of duplicate pages in the PDF when I try. I have yet to test that on the dev site because it gets mad about the relative paths I try to put in for PDFs, so that'll have to wait until I'm sourcing data from dev (I guess I could just pull out a couple of its file URLs statically now).

Kurt Trowbridge added 4h 46m to actual time for January 28 · 22 days ago
Kurt Trowbridge changed the description · [Show difference](#) · 21 days ago

Kurt Trowbridge · 19 days ago (edited) 

Noting where I'm at since I'm about to end my time on this for the week: I'm currently trying to take the blob URL that gets generated when merging PDFs, then rerun `react-pdf` with that file as the source so I can wrap it with headers, footers, and page numbers. So far, I haven't had luck with that.

“

Retrieving information from memory storage and bringing it into the focus of awareness, comparing information, evaluating, deciding—all make demands on the mind’s limited processing capacity.

Using docs to power AI tools

How can documentation improve business functions?

Documentation can improve business functions in a number of ways:

- **Mitigates the risk of people leaving.** If someone gets sick, leaves abruptly, or goes on maternity leave, anyone can jump in to complete their most important work. Critical business functions can go on uninterrupted, decreasing the financial cost of someone leaving and making it easier for the rest of the team to continue on.
- **Acts as a knowledge repository.** When you introduce documentation into your decision-making process, it acts as a knowledge repository. It holds the context, the insights, and the learning that came with each decision. And this repository can be referred back to when similar situations arise.
- **Promotes a culture of open feedback and collaborative decision-making.** Encourage your team to document their decision-making process to clarify assumptions, reasoning, and expected outcomes. Make it a standard practice to discuss these documented decisions in your meetings, promoting a culture of open feedback and collaborative decision-making.
- **Improves communication and alignment.** Great communication will assist with delegation, create alignment, increase awareness, and improve productivity.
- **Reduces the need for future questions.** The best way to have effective communication in a company is for the communication to be future-proof: reduce the need for future questions. The best way to do that is to write things down and organize them to make them easy to navigate. Every time you answer a question, you should know that someone six months from now should be able to find the answer to that question themselves.
- **Serves as a bridge that connects ideas, people, and vision.** Documentation isn't just a task on your to-do list; it's a pillar for success and a bridge that connects ideas, people, and vision. Treat it not as a burden but as an opportunity to learn, share, and create an impact.

Ask AI Q&A Beta

Explain how resources are ordered on endpoints within the Guide To Legal Help.

Resources on endpoints within the Guide To Legal Help are ordered based on a set of weights given to each option that a user selects at the beginning of the guide. The weight can be +1, +2, -1, or -2. The aggregate of these weights then determines the order of the resources shown at the end of the guide 3.

There are also Triage Actions which connect endpoints from the MI Triage taxonomy vocabulary to resources displayed when a respondent reaches the end of the triage form, selecting an endpoint as the legal issue they need help with 2.

Visibility restrictions can be set for Triage Actions, and they are configured to only appear on the endpoint if the respondent's screener responses meet the selected restrictions 2.

Resources are further grouped by content type and positioned based on a Region field value - Top message panel, Main panel, Help panel, or Bottom panel 2.

Preparing & planning
Managing the messy middle
Unlocking future potential
Effective > efficient

“Year of Efficiency”

Efficient teams:

- Adopt the mantra “move fast and break things”
- Value urgency over relevancy
- Work in unstable environments prone to errors and mistakes

Effective teams:

- Build with purpose and intention
- Value relevancy over urgency
- Make time to build processes and practices that establish stability

Being effective means getting good at the thinking and problem-solving that AI can't do for you.

Documentation helps speed up that process.

How to make documentation happen

01

Build it into your culture

02

Do it little by little

03

Make it everyone's responsibility

04

Tend to your garden

**Make documentation part of
your definition of “done.”**

Thank you!
